

CENSUS 2020: COUNT ALL KIDS!

The Census is a questionnaire used to get a complete population count of everyone living in the U.S.

The Census helps decide how much money your community will get for important resources, including schools, child care, summer & after school programs, and more.

It is critical that we count all kids in the Minnesota Census so that children and babies have the resources they need to be healthy and on track for a successful future.

Children under the age of 5 are the most likely group to be undercounted.

Children who are missed in the 2020 Census miss an opportunity to be counted for ten years - most of their childhood.

What can you do?

- Respond to the census completely and accurately--it's easy and secure so your personal data will be protected.
- On your form, be sure to include the information of all people living in the household on April 1.
- Spread the word: Every person filling out the census form needs to count EVERY CHILD living at that address, including babies.
